The mission of Arlington Pediatric Therapy Management Services is to provide quality therapy for children on an outpatient basis. Our primary focus is to improve the quality of life of all children with special needs and their families. Professional services are delivered in a friendly, family centered atmosphere, which offers collaborative programming and support for both the family and child. Staff and family work as a team to incorporate therapy goals into regular family routines. Physical, occupational, speech and developmental therapy services are expertly performed by licensed therapists who have extensive post-graduate experience including training in baby treatment, NDT (Neuro-Developmental Treatment), and SI (Sensory Integration) treatment.

Therapeutic intervention is available for newborns through young adults for neuro-logic, orthopedic or congenital conditions such as autism, attention deficit-hyperactivity disorder, cerebral palsy, Down Syndrome, hypotonia, learning disabilities, neuromuscular disorders, sensory processing disorder, mild or pervasive developmental disorder, muscular dystrophy, brachial plexus injury, torticollis, idiopathic toe walking, spina bifida, and traumatic brain injury. We also provide diagnostic and therapeutic services for cleft lip and palate, feeding and swallowing problems, fluency, language delay, voice, articulation and phonological disorders.

We Can Help When...

- A child has a delay in meeting motor milestones.
- A child has a diagnosis of cerebral palsy, PDD, autistic spectrum, dysfunction of sensory integration (DSI), spina bifida, closed head injury, hydrocephalus, Down Syndrome, congenital anomalies, or other neurological disorders.
- A child is having trouble with decreased skills in daily activities like feeding and dressing.
- A child has balance and coordination problems.
- A child is unable to organize self.
- A child has difficulty with handwriting.
- A child over-reacts or under-reacts to movement, touch or sound.
- A child demonstrates learning disabilities.
- A child is struggling with social skills.
- A child is having trouble with speaking or language.
- A child has problems swallowing or feeding.
- A child's movements, patterns and postures seem unusual.
- A child's family members need information and support.

Physical Therapy

Our skilled physical therapists will help your child improve strength, mobility and function through the use of playful and child-friendly exercises.

We offer:
